RESEARCH TENDER CALL

TENDER INFORMATION DOCUMENT

Project Reference No.: 05-2021

Project Title: Communicating food poverty – understanding the current discourse on the island of Ireland

1. Objective/Knowledge Gap

Food poverty is complex in nature and there is a common misperception that it is related only to poor choices by individuals therefore it can be a challenging topic on which to communicate. The current proposal aims to explore the discourse on the topic of food poverty in the media, at community level and in policy making on the island of Ireland to facilitate more effective communication and awareness.

The objectives are to:

- Identify where food poverty features in public policy documentation, detailing the language used and how food poverty is framed
- Explore the media discourse on food poverty in broadcast and non-broadcast media on the island of Ireland (IOI)
- Investigate key stakeholder's (policy makers, media and community representatives) understanding and perceived relevance of food poverty using qualitative research
- Investigate consumers' perceptions on how the topic of food poverty is framed in the media.

Ultimately, this research project and its recommendations could support a more effective way to communicate food poverty to policy makers and the media, to raise awareness and improve knowledge of food poverty and to destigmatise the issue of food poverty for those who experience it.

2. **Background**

Inequality in accessing a nutritionally adequate and acceptable diet i.e. food poverty is a major risk factor for non-communicable diseases. Food poverty is defined as ‘the inability to have an adequate and nutritious diet due to issues of affordability and access to food, with related impacts on health, culture and social participation being felt’. Food poverty therefore not only affects what people eat, it also impacts on people’s lifestyles, social interactions and health. It is a core experience of poverty. Data published by the Northern Ireland Statistics and Research Agency show that 17% of the population were in relative poverty in 2019/20 and 13% in absolute poverty (before housing costs) (1). In Ireland 9% of households experienced food poverty in 2017 (2).

Food Poverty is a priority for both governments on the IOI. An All-island Food Poverty Network was established in 2009 to provide a co-ordinated and strategic approach to tackling food poverty on the island of Ireland. The Network supports the development of consensus on related issues, collaboration and shared learning (3) and is co-chaired by **safefood** and The Food Standards Agency, Northern Ireland. One of the objectives of the All-island Food Poverty Network is to raise awareness of Food Poverty on the island of Ireland, and to that end **safefood** is undertaking this piece of research to generate data on the awareness of food poverty on the island of Ireland from a number of different perspectives to better inform and support communications in this area. This research project acknowledges the important role that media plays in defining a social problem like food poverty and how it can influence directly or indirectly the policy process (4).

3. **Approach**

It is proposed that the aim of the project be in-part achieved through an initial literature review of existing data (from both the island of Ireland (IOI) and internationally). It is proposed that the aims and objectives of the current research are met by using a mixture of methods including qualitative and quantitative methods.

4. Technical Specification

(a) Scope of research

The research should:

- Consider media content published over a period of at least 5 years
- Consider policy documents published over a period of at least 10 years
- Consider how food poverty and its drivers were described, and which solutions were proposed
- Ensure that consumers who participate in the qualitative work are representative of population in terms social class, age, region and rural/urban
- Be collaborative across a number of relevant disciplines including experts in public health, policy, content analysis and communications and other relevant fields.

It should be noted that **safefood** is not an active participant in the project and sole responsibility lies with the successful tenderer.

(b) Literature review

The literature review should include peer-reviewed publications and a full search of the grey literature including government and other organisation reports, and conference proceeding etc. Detail must be provided regarding how the literature review will be structured and completed along with quality assurance mechanisms e.g., review by more than one researcher.

(c) Qualitative and quantitative research

A full justification and rationale for the proposed methodology and analytical approach will be required. It will be necessary to indicate for all aspects of the project how the proposed data will be collected, analysed and reported. The research should be mixed in nature. The contractor is responsible for developing and piloting any topic guide which will be used to facilitate the qualitative discussions. The contractor is encouraged to use tools such as vignettes or visual aids to facilitate a more relevant and open discussion for the participants.

Form Type: Tender Information Document	Issued By: Director Food Science

(d) Outline of proposed data sources

For this study, different data sources will be required. The researcher must enumerate the sources they intend to use and demonstrate access and experience in the use of the proposed data sources, as well as the relevant permissions to do so. The data sources will include data from:

- Review of relevant policy documents
- Media content analysis to build a dataset of relevant newspaper articles and other media pieces to identify stakeholder
- Focus groups with key stakeholder's (policy makers, media and community representatives)
- Focus groups with consumers.

(e) Analysis

A full and detailed methodology must be provided on how the data sources are going to be utilised, analysed and interpreted to meet the objectives of the project.

(f) Data handling and Reporting

- The contractor will submit to **safefood**, on a six-monthly basis, an interim report containing details of the progress for each deliverable of the project.
- The contractor is responsible for collating all results and a final report will be submitted to **safefood** on completion of the study.
- All forms, documentation and electronic files must be retained by the contractor until further notice for **safefood** in case of issues arising after the completion of the research.

(g) Quality assurance

- Ethical approval will be an essential component where data collection from participants is involved.
- The contractor will use validated methods where applicable and will apply best practice quality controls to approaches.
- To ensure transparency and reproducibility, all data sources used in the research must be specified, and all data used must be explicitly specified and justified.

- **safefood** may visit the contractors during the course of the research to assess how the work is being carried out.

5. Proposed Activities/Deliverables

- Recommendations on how to communicate food poverty to different audiences, including supports to the community sector on best practices to highlight food poverty, to raise awareness and communicate it as a priority.
- Submission on a 6-monthly basis of an interim report on progress.
- Analysis of the final dataset, collation of the results and drafting of a final report to be submitted to **safefood** at the end of the 12-month study period.

6. Evaluation of Tenders

Tender bids will be evaluated according to the quality of proposals and applicants using the following criteria:

Quality of the proposal:

- ✓ Anticipated deliverables;
- ✓ Research method and facilities;
- ✓ Value for money;
- ✓ Potential for application;
- ✓ Work plan, including the overall timeframe.

Quality of Applicants:

- ✓ Experience in subject area;
- ✓ Quality Assurance and Quality Control measures in place.

7. Duration of Project

Estimated duration of the project: Total of 12 months. A detailed timescale of research should be submitted by the applicant.

8. Tender Application Forms and Guidelines
